
Fish Shell Notes

Ralph W. Crosby, PhD.

Wed Dec 23 08:48:57 EST 2020

1 Installation

- Point to the configuration
`ln -s ~/SharedEnvironment/fish ~/.config/fish`
- MacOS - Add `/usr/local/bin/fish` to `/etc/shells`

2 Prompt Handling

- `iterm2` doesn't handle all unicode characters (emoji's) correctly so limited to known working characters (e.g. chipmunk)
